Customers forget one-off changes like holiday hours. Search results go out of date. People turn up when the business is closed.

Fonecta Connect publishes a business to Google, maps, directories and AI services. Today the owner must log in and remember. Kaiku asks instead.

Kaiku · Connect suggests. The customer approves.

Connect suggests, the customer approves: five steps, no login, and the customer has the last word.

1 · DETECT

A broker subscription fires when a holiday has no exception hours. Calendar live from Nager.Date.

2 · SUGGEST

Last year's hours with the reason in plain words. When Kaiku is not sure, it asks one question and proposes nothing.

3 · CONTACT

Three ways, no login: email with a decision link, then WhatsApp, then a phone call if nothing was decided.

4 · DECIDE

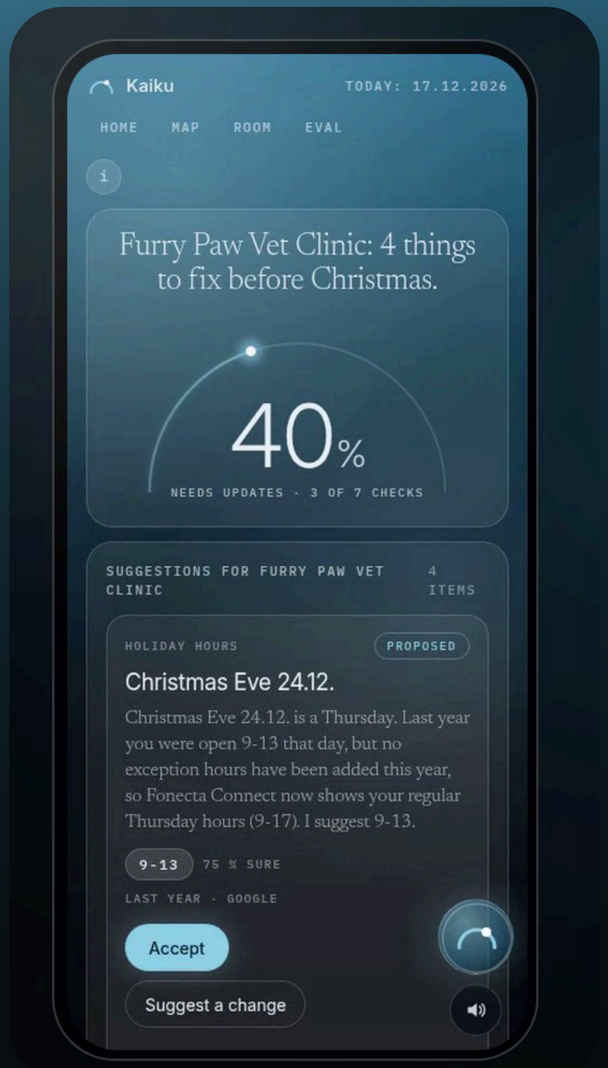

Accept, Suggest a change or Discard. A button in WhatsApp, a yes on the phone, or typed hours.

5 · APPLY

Written to the Yext sandbox and read back. The receipt says what the read-back proves.

FIWARE ORION-LD CONTEXT BROKER · THE SPINE

One Store entity, one attribute, one instance per source (datasetId). The subscription fires Detect, the owner's yes writes the default instance, the notification applies to Yext. The Yext write never depends on the broker.

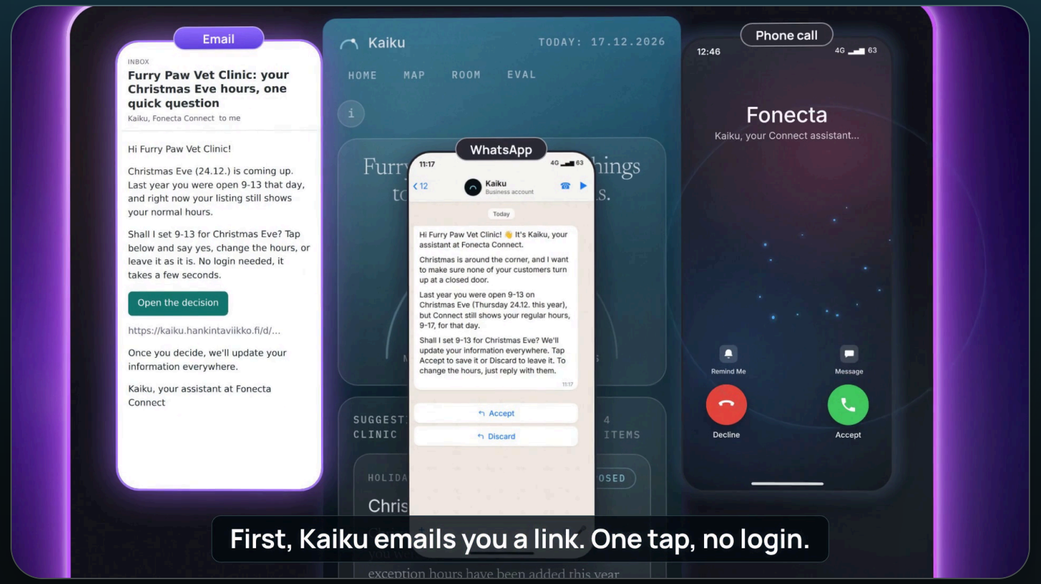

One tap saves, a typed reply carries the actual hours, and we read the change back from Yext.

One tap

ACCEPT, CHANGE THE HOURS, OR DISCARD. THE OWNER HAS THE LAST WORD

No login

A LINK IN THE EMAIL, A BUTTON IN WHATSAPP, A YES ON THE PHONE

The three ways as the owner sees them: the plain-words email, the WhatsApp message with Accept and Discard, the call from Kaiku.

Kaiku does not invent work. When it is not sure it asks instead of guessing, every proposal carries its reason, and nothing is written until the owner says yes.

8.11. FATHER'S DAY

No change needed.

A flag day, not a public holiday, and the clinic is closed on Sundays. The reason is shown, not silence.

COLD START, NO HISTORY

One question, no guess.

Nothing to lean on, so no guess. Kaiku asks the owner what they did last year and proposes nothing until it knows.

A FAILED WRITE

Never reported as saved.

Receipts are built from the apply result and the Yext read-back. Hours are validated locally before anything leaves.

After every decision Kaiku asks one question: how would you like to be reached next time? Email, WhatsApp or a call. It remembers the answer.

AN EDIT TO 10-14

Your own hours come first next year.

An edit is remembered and becomes next year's first suggestion.

TWO DECLINES

The holiday turns into "no change".

Kaiku stops asking about what the owner has refused twice.

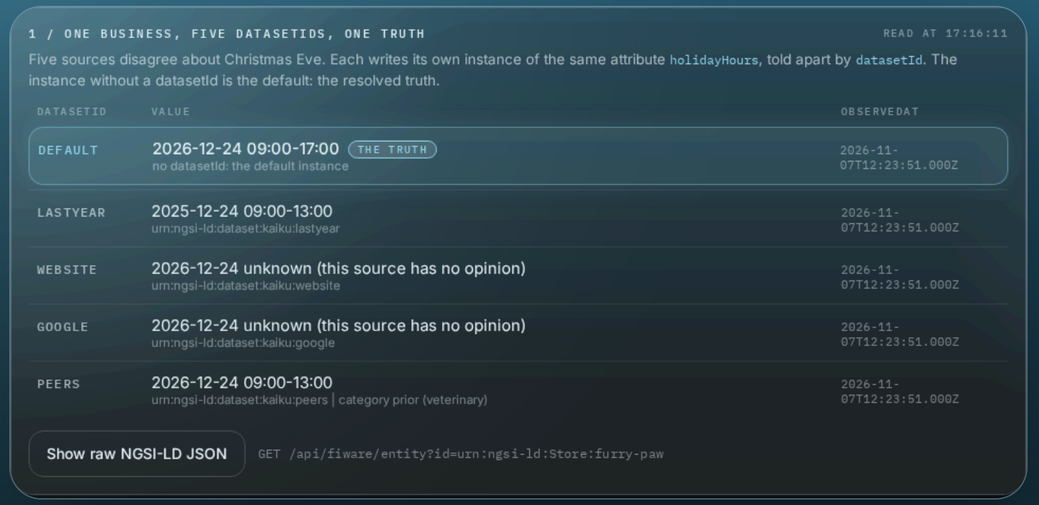

STANDING PERMISSION

Applied without asking, owner told afterwards.

Asked once, after an approval, only when last year's data exists.

AFTER EVERY DECISION, ON EVERY CHANNEL

The preferred channel comes first next time, for that owner only. Asked on the page, in WhatsApp and on the phone alike.

The live /fiware page: one holidayHours attribute, one instance per source, the default marked as the truth, read from Orion-LD when the page loads.

One business, many sources, one truth, and every source keeps its own provenance.

ENTITY

urn:ngsi-ld:Store:furry-paw, Smart Data Models Store

ATTRIBUTE

holidayHours, one instance per datasetId: lastyear, website, google, peers, proposed, and the default the owner's yes writes

SUBSCRIPTIONS

kaiku-holiday-hours-missing fires Detect, kaiku-holiday-hours-resolved fires Apply

AURA

live Turku buses, ships and weather in the same broker, moving as the city moves

NGSI-LD-MCP

our MCP server over any NGSI-LD broker: agents read, propose and subscribe; only a human decides

Three ways to reach the owner, each tried only if the one before brought no decision. No login, ever.

01 · EMAIL FIRST

The proposal and a decision link.

Plain everyday words, the reason, and one link that needs no login. Accept, change the hours, or discard.

02 · WHATSAPP NEXT

If there is no decision.

The same proposal as a conversation, with Accept and Discard buttons. New hours can simply be typed back.

03 · THEN KAIKU CALLS

If there is still none.

A short call in a warm voice that reads the proposal and takes a yes, or the new hours, out loud.

ONE UNANSWERED CHANNEL NEVER ENDS THE CHAIN

A decision on any channel cancels the next step. Afterwards Kaiku asks which way the owner prefers next time, and remembers it.

Same loop, more use cases.

SAME LOOP

Review replies and posts: the page already drafts a reply to a sample review and corrects a typo in the description.

PRODUCTION SOURCES

Connect's exception-hours history, Google Business Profile, category peers from the customer base.

THREE WAYS TO REACH

Email, then WhatsApp, then a call. All three are live today, and the owner picks the order for next time.

Scan and try it on your own phone.
